

Password Reset Guide

Overview

This guide explains how TechCorp Cloud users can reset a forgotten password, troubleshoot reset emails that don't arrive, and resolve account lockouts caused by repeated failed login attempts.

Standard Reset Procedure

Go to <https://app.techcorpcloud.com/login> and click "Forgot password?"

Enter the email address associated with your account.

Check your inbox for an email from no-reply@techcorpcloud.com with the subject "Reset your TechCorp Cloud password."

Click the reset link. The link is valid for 30 minutes from the time it is sent.

Choose a new password that is at least 10 characters long and includes one number and one symbol.

You will be automatically logged in and redirected to your dashboard.

If the Reset Email Doesn't Arrive

- Check your spam, junk, or promotions folder.
- Confirm the email address you entered matches the one on file. You can verify this by attempting to sign up with the same address — if it says "account already exists," the address is correct.
- Add no-reply@techcorpcloud.com to your contacts or safe-sender list.
- Corporate email filters (Outlook/Exchange) sometimes quarantine automated mail. Ask your IT department to allowlist the [techcorpcloud.com](https://app.techcorpcloud.com) domain.
- Reset emails are resent automatically after 5 minutes if not received; you can request a new one from the login page after that window.

Account Lockouts

After 5 consecutive failed login attempts, the account is temporarily locked for security reasons.

- Lockouts release automatically after 15 minutes.
- If you need immediate access, use the "Forgot password?" flow above — a successful password reset immediately clears any active lockout.
- Accounts flagged for suspicious activity (e.g., logins from unusual locations) may require manual verification by support. These cannot be self-resolved and require escalation to the Account Security team.

Two-Factor Authentication (2FA) Reset

If you have 2FA enabled and lost access to your authenticator device:

On the login screen, select "Use a backup code" and enter one of the 10 backup codes generated when you set up 2FA.

If you don't have backup codes, 2FA cannot be disabled via self-service. This requires identity verification through a human support agent.

Password Policy

- Minimum 10 characters.
- Must include at least one number and one special character.
- Cannot reuse any of your last 5 passwords.
- Passwords expire every 180 days for Enterprise-tier accounts (configurable by the account admin).
